

# ISO 14001:2004

ISO 14001: 2004 standard is designed to help organisations manage its Environmental Management System (EMS) effectively & to continually improve its Environmental Performance including compliance with legal requirements. It is built on the Plan, Do, Check & Act (PCDA) model for continual improvement.

Companies can use this standard to establish an EMS & check internally by conducting internal audits. If there is need to get registered, can engage an accredited ISO 14001:2004 registrar to do Third party audits, who can issue ISO 14001:2004 certificate. Third party certification gives credibility to the EMS.

## ***Integrating with other Management systems Ex: existing ISO 9001:2008 based Quality Management system (QMS)***

EMS based on ISO 14001 can be married to a Quality Management System (QMS) based on ISO 9001:2008 as many requirements for both the standards are very similar. Management Review, Internal audit, Corrective action, Preventive action are some of them.

Similarly you can integrate the existing EMS with Occupational Health & Safety Management System (OHSMS) (OHSAS 18001:2007), Food Safety Management System (FSMS) based on ISO 22000, HACCP, and many others.

IEM System Inc provides services in the following areas:

Consulting

Auditing
